

**Newfoundland Labrador Hydro (NLH)
Supply and Demand Status Report Filed Thursday, December 24, 2020**

**Section 1
Island Interconnected System Supply, Demand & Exports
Actual 24 Hour System Performance For Wednesday, December 23, 2020**

Supply Notes For December 23, 2020

- A As of 1903 hours, December 18, 2020, Hawkes Bay Diesel Plant available at 2.5 MW (5 MW).
- B At 0820 hours, December 23, 2020, Holyrood Unit 2 available (170 MW).
- C At 0820 hours, December 23, 2020, Holyrood Unit 3 available (150 MW).
- D At 1100 hours, December 23, 2020, Holyrood Unit 1 available (170 MW).

**Section 2
Island Interconnected Supply and Demand**

Thu, Dec 24, 2020	Island System Outlook ³	Seven-Day Forecast	Temperature (°C)		Island System Daily Peak Demand (MW)	
			Morning	Evening	Forecast	Adjusted ⁷
Available Island System Supply: ⁵	2,060 MW	Thursday, December 24, 2020	-4	-3	1,475	1,370
NLH Island Generation: ⁴	1,690 MW	Friday, December 25, 2020	1	5	1,145	1,044
NLH Island Power Purchases: ⁶	120 MW	Saturday, December 26, 2020	3	7	1,165	1,064
Other Island Generation:	250 MW	Sunday, December 27, 2020	8	3	1,240	1,138
ML/LIL Imports:	- MW	Monday, December 28, 2020	-2	-1	1,360	1,256
Current St. John's Temperature & Windchill:	-3 -8 °C	Tuesday, December 29, 2020	0	5	1,340	1,237
7-Day Island Peak Demand Forecast:	1,475 MW	Wednesday, December 30, 2020	2	-1	1,355	1,251

Supply Notes For December 24, 2020

- Notes:
- Generation outages for running and corrective maintenance are included. These are not unusual for power system operations. They generally do not impact customer supply. The power system operators schedule outages to system equipment whenever possible to coincide with periods when customer demands are low and sufficient supply reserves are available. However, from time to time equipment outages are necessary and reserves may be impacted.
 - Due to the Island system having no synchronous connections to the larger North American grid, when there is a sudden loss of large generating units there may be a requirement for some customer's load to be interrupted for short periods to bring generation output equal to customer demand. This automatic action of power system protection, referred to as under frequency load shedding (UFLS), is necessary to ensure the integrity and reliability of system equipment. Under frequency events have typically occurred 5 to 8 times per year on the Island Interconnected System and the resultant customer load interruptions are generally less than 30 minutes. With the activation of the Maritime Link frequency controller during the winter of 2018, UFLS events have occurred less frequently.
 - As of 0800 Hours.
 - Gross output including station service at Holyrood (24.5 MW) and improved NLH hydraulic output due to water levels (35 MW).
 - Gross output from all Island sources (including Note 4).
 - NLH Island Power Purchases include: CBPP Co-Gen, Nalcor Exploits, Rattle Brook, Star Lake, Wind Generation and capacity assistance (when applicable).
 - Adjusted for curtailable load, market activities and the impact of voltage reduction when applicable.

**Section 3
Island Peak Demand Information
Previous Day Actual Peak and Current Day Forecast Peak**

Wed, Dec 23, 2020	Actual Island Peak Demand ⁸	17:25	1,259 MW
Thu, Dec 24, 2020	Forecast Island Peak Demand		1,475 MW

- Notes: 8. Island Demand / LIL / ML Exports (where applicable) is supplied by NLH generation and purchases, plus generation owned and operated by Newfoundland Power and Corner Brook Pulp & Paper (Deer Lake Power, DLP).
