

1 Q. Does Hydro conduct coordination and fault duty studies on its subtransmission and  
2 distribution systems? If yes, are these studies periodic or driven by changes in the  
3 systems?

4

5

6 A. Hydro completes periodic coordination and fault duty studies on its distribution  
7 systems. These studies are driven by changes in the systems such as new  
8 generation additions, transformer additions, customer motor load additions (i.e.,  
9 motor starting), requirements for arc flash calculations, feeder extensions,  
10 customer connections, etc.
