

1 Q. **Asset Management**

2 Does Hydro have any underground/submarine transmission lines? If yes, state how
3 many and where they are located and who maintains and replaces them.

4

5

6 A. Hydro's response to DD-NLH-068 provides a listing of all Hydro's
7 underground/submarine cables at the distribution voltage levels. At present, Hydro
8 does not own any underground or submarine cable as part of its main transmission
9 system on the Island portion of the province. However, Hydro does utilize a
10 number of short, underground sections of 66 kV class cable at its Holyrood Thermal
11 Generating Station to connect the 66 kV winding of 230/66 kV transformer T10 and
12 the 66 kV windings of 66/41.6 kV station service transformers SST-12 and SST-34 to
13 the 66 kV buses B6 and B7. These 66 kV cables are maintained by Transmission and
14 Rural Operations personnel.
