

1 Q. Further to the response to PUB-NLH-483, please state what progress has been
2 made towards identifying the proposed new type of under-frequency load shedding
3 and its setting, to avoid unnecessary load shedding, whilst still maintaining the
4 security of the Island Interconnected System.

5

6

7 A. Analysis to determine the required under frequency load shedding scheme to
8 maintain security of the Island Interconnected System has not progressed to the
9 point where Hydro can make a definitive recommendation on the magnitudes of
10 load shed blocks or the settings for said blocks at this time.
