

- 1 **Q. Do transmission line, distribution line and vegetation management inspectors**  
2 **download inspection results into the Transmission Asset Management System or**  
3 **Avantis programs on a daily basis? Do the inspectors determine the repair priorities**  
4 **or does someone else? Do Regional Planners schedule the repair work?**  
5
- 6 A. Planners complete transmission and distribution line inspections and will typically  
7 download inspection results from their mobile devices to the asset management system  
8 on a daily basis. The exception being, due to the length and location of the line being  
9 inspected, the Planner may complete the inspection over multiple days and download the  
10 inspection results when the entire inspection is completed.  
11
- 12 Planners determine repair priorities and will consult with the appropriate supervisor when  
13 required. Supervisors are responsible for scheduling work resulting from the inspections.
