

Q. The response to PUB-NP-033 indicates that Newfoundland Power maintains an adequate level of transmission, distribution, and substation spare parts and equipment. Provide inventory documents, if practical, which would indicate the amounts of available spare parts and equipment. The response also indicated that the Company has materials sufficient to replace 5 kilometer of transmission lines. Is this for 138kV or 66kV lines?

A. Newfoundland Power maintains an inventory of electrical system equipment and parts in its Central Stores facility as well as in area offices located throughout the Company's service territory.¹ A listing of equipment and parts from Central Stores and area offices is provided in Attachment A.

Electrical System equipment and parts related to substations is stored at Newfoundland Power's Electrical Maintenance Centre ("EMC").² A listing of equipment and parts from the EMC is provided in Attachment B.

Newfoundland Power has a consignment contract with its pole supplier. The contract requires the pole supplier to provide wood poles to Newfoundland Power's pole installation contractors at a fixed price.³ Wood pole inventories are maintained at the pole supplier's facility as well as at the pole installation contractors designated pole storage yards located throughout Newfoundland Power's service territory.⁴ The current inventory of wood poles located at the pole supplier's facility and in the designated pole yards is provided in Attachment C.

Through contractual agreements, some of the Company's electrical system equipment vendors are required to maintain dedicated release quantities in local warehouses to help ensure adequate equipment and parts are available outside of Newfoundland Power's internal inventory.⁵

Newfoundland Power maintains enough materials to replace both 5 kilometers of 66kV transmission lines as well as 5km of 138kV transmission lines.

¹ Newfoundland Power's Central Stores facility is located at the St. John's Regional office located at 50 Duffy Place in St. John's. The Company has 8 area offices located throughout its service territory.

² The EMC is located at 877 Topsail Road in Mount Pearl. The equipment and parts stored at this location includes mostly large substation items such as circuit breakers, voltage regulators, reclosers, and substation power transformers.

³ When poles are installed, an invoice for the pole installation labour as well as the cost of the pole is provided by the pole installation contractor to Newfoundland Power. The pole supplier invoices the pole installation contractor for the cost of the pole.

⁴ Island pole inventories represent a shared inventory held by our supplier at various locations across the island portion of Newfoundland and Labrador. These pole quantities may also be drawn upon by Newfoundland and Labrador Hydro and Bell Aliant.

⁵ Newfoundland Power's Purchase Order in place resulting from Request for Quotation RT003906 is an example of a purchasing arrangement that has a requirement for maintaining dedicated release quantities. This Purchase Order includes distribution hardware used by Newfoundland Power line crews on a daily basis. Dedicated release quantities are reviewed prior to extending or renewing the Purchase Order.
