

1 Q. **Reference: Project 1 Rewind Stator (2025–2026) – Hinds Lake, Attachment 2, page 15 of 16.**

2 Qualitrol’s Partial Discharge Test Report recommended retesting the unit in 6 months. Did
3 Hydro retest the unit as recommended? If yes, what were the results? If no, why not?

4

5

6 A. No. Due to limited resource availability, Newfoundland and Labrador Hydro (“Hydro”) has not
7 completed a retest of this unit to date. Hydro intends to retest the unit and review the data with
8 the support of a consultant in September 2024. The results of the unit retest are intended to
9 better inform the discussion with Qualitrol and will not affect Hydro's recommendation to
10 proceed with the replacement of the stator winding.
