

1 **Q. Reference: “2022/2023 General Rate Application,” Newfoundland Power, May 27,**  
2 **2021, Volume 2, Section 3, Appendix C, Note 5.**

3  
4 **In Appendix C, Newfoundland Power notes that its Purchased Energy and Demand**  
5 **forecast assumes a generation credit of 118.054 MW. Please provide the breakdown**  
6 **of the credit by hydraulic and thermal generation.**

7  
8 A. The generation credit of 118.054 MW is set out in Newfoundland and Labrador Hydro’s  
9 *Schedule of Rates, Rules, and Regulations* (the “Utility rate”).

10  
11 Table 1 provides a breakdown of the credit between hydraulic and thermal generation.

**Table 1:  
Generation Credit**

Hydraulic	83.486 MW
Thermal	34.568 MW
<b>Total</b>	<b>118.054 MW</b>

12 The Utility rate stipulates that in order to avail of the generation credit, Newfoundland  
13 Power must demonstrate the capability to operate its generation to the level of the  
14 generation credit.<sup>1</sup> This is verified by a test, typically completed in December of each  
15 year, by operating the generation at a minimum of the level of the generation credit for a  
16 period of one hour.

---

<sup>1</sup> See page UT-1 of the Utility rate, effective July 1, 2021.
