- c) Please verify whether the elasticity effects calculated in the existing sales forecast took into account the timing impact of the July 1, 2024 rate implementation. Additionally, confirm that separate elasticity impacts were calculated for each timing scenario outlined in the "Additional Information" filing.
- d) Please provide a Statement of Income, a Regulated Return on Equity, and a Rate of Return on Rate Base calculation based on an existing 2024 Forecast Before Recovery without 1.5% elasticity impacts incorporated, including comparatives to the "Before Recovery" numbers presented in Appendix D of Newfoundland Power's "2024 Rate of Return on Rate Base Application."

NLH-NP-015 Reference: Newfoundland Power's response to PUB-NP-004 of this proceeding

Newfoundland Power's jurisdictional scan demonstrates that utilities in Ontario and Alberta employing a performance-based regulation rate setting approach adjust their rates through a comprehensive amendment of their Cost of Service, which incorporates inflationary and efficiency adjustments. The utility in British Columbia conducts a wideranging evaluation of its Cost of Service and modifies rates to reflect changes each year. The utilities in Atlantic Canada that employ a pure Cost of Service rate setting approach, generally leave the costs associated with their test years unchanged.

Newfoundland and Labrador Hydro observes that through the varying rate setting approaches identified in the jurisdictional scan, the utilities generally make comprehensive changes to their costs between test years, or none. These methodologies

| 1 | are in contrast to Newfoundland Power's approach, where adjustments were made to the |
|---|---|
| 2 | forecast rate base and return on rate base without testing changes in other components |
| 3 | of revenue requirement. |
| 4 | Please explain why Newfoundland Power believes that its specific modification to revenue |
| 5 | requirement aligns with the rate setting methodologies outlined in the jurisdictional scan. |

DATED at St. John's, in the Province of Newfoundland and Labrador this 12th day of January, 2024.
