1 **1. The Application**

2
3 Facility Association (“Facility”), as operator of the residual market mechanism for automobile
4 insurance in the Province, filed a Category 2 application on March 6, 2014 seeking approval of
5 increased rates for its Newfoundland and Labrador Public Vehicles – Taxis and Limousines
6 (“Taxis”) class of business (the “Application”). The Application proposes rate increases for
7 Third Party Liability, Accident Benefits and Uninsured Automobile coverages, to be effective no
8 earlier than August 1, 2014, as follows:

Facility Association Proposed Taxi Rate Increases¹			
	Third Party Liability	Accident Benefits	Uninsured Automobile
Proposed % Increase	+50.0%	+294.3%	+329.3%
Proposed Average \$ Increase	+\$1,417	+\$235	+\$46

9 Facility estimates that its Application proposals, if approved, will result in an increase of 54.1%
10 in its overall rate level for all coverages combined, including Physical Damage. The Application
11 also proposes a number of additional changes, including increased limits for Third Party Liability
12 and Physical Damage coverages, elimination of certain discounts, rating amendments and other
13 rule changes.

14
15
16 **2. Procedural Matters**

17
18 Notice of the Application was provided directly to policyholders and published in newspapers
19 beginning March 26, 2014. Copies of the Application and supporting documentation were made
20 available on the Board’s website.

21
22 The Board’s actuarial consultants, Oliver Wyman Limited (“Oliver Wyman”), filed a report on
23 May 9, 2014, which was finalized on May 16, 2014, outlining its review of the actuarial
24 justification provided in the Application. Facility responded to Oliver Wyman’s report on May
25 14, 2014.

26
27 On May 1, 2014 Thomas Johnson notified the Board that, pursuant to his appointment under
28 section 61 of the *Automobile Insurance Act*, he would be acting as Consumer Advocate in the
29 proceeding, representing the interests of automobile insurance customers.

30
31 A Notice of Hearing was published in newspapers throughout the Province starting July 9, 2014
32 inviting intervenor submissions, comments and presentations.

33
34 On July 24, 2014 Thomas Johnson filed an intervenor submission as Consumer Advocate.

¹ Proposed average increase as shown in Facility’s cover letter to the Application. Individual policyholder increases will vary depending on coverage level and driving record

1 As a result of the direct and published notices the Board received 14 written comments on the
2 Application proposals, primarily from taxi operators and/or drivers.

3
4 A number of information requests were issued by the Board and the Consumer Advocate, all of
5 which were responded to by October 29, 2014.

6
7 A Notice of Hearing Date was published starting on October 13, 2014. The hearing of the
8 Application was scheduled to begin on Wednesday, November 5, 2014 at the Board's office in
9 St. John's. The public hearing was held over a five-day period November 5-7, 2014 and
10 November 17-18, 2014.

11
12 At the hearing Facility was represented by counsel, Kevin Stamp, Q.C. and Jennifer Newbury.
13 The Board was assisted by its counsel, Jacqueline Glynn, and Cheryl Blundon, Board Secretary.
14 The Consumer Advocate, Thomas Johnson, Q.C. was assisted by his counsel Thomas Williams,
15 Q.C.

16
17 Shawn Doherty, FCAS, FCIA, Facility's Senior Vice President of Actuarial Services and Chief
18 Financial Officer, and Paula Elliott, FCAS, FCIA, Oliver Wyman's Principal Actuary, provided
19 expert testimony.

20
21 The Board also heard presentations from Doug McCarthy of St. John's Taxi Co-operative
22 Society Limited and Todd Edmunds of Star Taxi in Corner Brook.

23
24 Written submissions were filed by Facility and the Consumer Advocate on January 9, 2015 and
25 reply submissions were filed by both on January 14, 2015.

26 27 28 **3. Background**

29 30 i) Legislation

31
32 Facility was established under section 97 of the *Insurance Companies Act* as an unincorporated
33 non-profit association of insurers. Under subsection 98(2) Facility is required to establish a Plan
34 of Operation: a) to provide automobile insurance to owners and licensed operators of
35 automobiles who would otherwise be unable to obtain that insurance; and b) to provide, in
36 accordance with sections 45.1 and 45.21 of the *Automobile Insurance Act*, payment with respect
37 to claims for damages made by persons who are not insured under a contract within the meaning
38 of section 33 of the *Automobile Insurance Act* and who have no other insurance or who have
39 other insurance that is inadequate with respect to the damages claimed.

40
41 Pursuant to section 102 of the *Insurance Companies Act* Facility is required to file automobile
42 insurance rates with the Board and the Board is required to address the rate filing as set out in the
43 *Automobile Insurance Act* and the regulations thereunder. The legislation sets out how the Board
44 is required to assess a proposed rate, and specifically the grounds upon which the Board is
45 required to assess a rate increase. Section 8 of the regulations requires the Board to determine if a
46 proposed rate is too high:

1 8. (1) *Where a rate filed by an insurer under section 51 of the Act constitutes an increase*
 2 *in a rate previously filed, the board shall determine if the proposed rate is too high.*

3
 4 (2) *The board shall vary or prohibit a rate that it determines is too high.*

5
 6 (3) *A rate approved by the board comes into effect on the date approved by the board.*
 7

8 Section 11 of the regulations states:

9
 10 11.(1) *For the purpose of subsections 7(1), 8(1) and 10(1), the board shall determine if*
 11 *the insurer's proposed rate is in excess of that which is required or justified on the basis of*
 12 *the insurer's projected loss experience, expenses and investment income for its automobile*
 13 *insurance business for the province and other elements considered appropriate by the board.*

14
 15 (2) *The board shall in its determination under subsection (1) ensure that the projected*
 16 *loss experience takes into account the insurer's loss experience in the province where that*
 17 *experience is relevant, adequate or otherwise reasonable for use in establishing rates.*

18
 19 (3) *Where the board determines that an insurer's loss experience in the province is not*
 20 *relevant, inadequate or otherwise unreasonable for use in establishing rates, the board shall*
 21 *determine the elements and information upon which an insurer shall file its projected loss*
 22 *experience with the board.*
 23

24 ii) Filing Guidelines and Directives

25
 26 The Board issues Filing Guidelines for automobile insurance rates in the Province, setting out the
 27 information requirements that must accompany all filings for Private Passenger, Commercial and
 28 Miscellaneous automobile insurance rates. The Filing Guidelines are made available to all
 29 insurers currently writing or planning to write automobile insurance in the Province.²
 30

31 As part of the Filing Guidelines the Board also publishes guideline loss trend rates that may be
 32 used by insurers in rate filings without the need for further actuarial supporting analysis. These
 33 loss trend rates are developed by the Board's consulting actuaries and are updated by half-year as
 34 new Industry Newfoundland and Labrador data is made available by the General Insurance
 35 Statistical Agency ("GISA"). The Board forwards the new loss trend rates to the Industry for
 36 comment and, upon acceptance by the Board, the loss trend rates are issued in a Directive and
 37 may be used by insurers in rate filings. If an insurer wishes to use alternate loss trend rates other
 38 than those provided by the Board the Filing Guidelines state that it must provide "*satisfactory*
 39 *data supporting their chosen factors and rationale why their selected factors are more*
 40 *appropriate for use by the insurer.*"
 41

42 The Filing Guidelines set out that, where a filing contemplates changes to base rates or other
 43 factors that result in an increase in any rate for any coverage for any insured, the filing is
 44 considered a Category 2 filing and prior approval is required. In order to satisfy the legislative
 45 provisions, a Category 2 rate filing must include an actuarial memorandum that provides a
 46 general description of the rate indication methodology as well as a discussion of each

² The most recent Filing Guidelines were issued September 1, 2011 and are available on the Board's website at
<http://www.pub.nl.ca/down/2011FilingGuidelines.pdf>

1 consideration in the rate indication methodology. The rate analysis must include a clear
 2 explanation of the approach and data used, the rationale for each key assumption made and the
 3 reasons for any changes in methodology or judgements from those in the company's last
 4 approved rate filing. In no case does the Board accept a rate proposal for a coverage that is
 5 higher than the supported rate level need for that coverage.

6
 7 The Filing Guidelines are intended to support efficiency and consistency in the regulation of
 8 automobile insurance rates in the Province. The Newfoundland and Labrador loss experience can
 9 be limited due to the small number of insureds, and particularly when looking at the experience
 10 of individual companies. Issuing acceptable trend rates based on Industry data provides an option
 11 for those insurers without company specific experience to justify a filing proposal and for
 12 insurers who may wish to avoid the costs associated with conducting a full loss trend analysis.

13
 14 iii) Facility's 2013 Application

15
 16 The last Category 2 application by Facility for its Taxis class of business was made on January
 17 24, 2013, requesting approval of increased rates for Third Party Liability, Accident Benefits and
 18 Uninsured Auto coverages. In that application Facility proposed an increase of 50% in rates for
 19 Third Party Liability, and an increase of 100% in rates for both Accident Benefits and Uninsured
 20 Automobile. While the review by the Board's actuaries identified some issues for the Board's
 21 consideration, Facility's proposed rates were not found to be too high based on the justification
 22 provided. In Order No. A.I. 9(2013) the Board approved the rate proposal from Facility for its
 23 Taxis class of business, with new rates effective August 1, 2013.

24
 25
 26 **4. Review of Application**

27
 28 Facility's rate indications and proposed rate changes are shown below:³

Coverage	Facility Rate Indication ⁴	Facility Proposed Rate Changes
Third Party Liability	+67.3%	+50.0%
Accident Benefits	+294.3%	+294.3%
Uninsured Automobile	+329.3%	+329.3%
Physical Damage ⁵	-9.1%	0%
Total	+69.7%	+54.1%

29 Facility proposes to limit the Third Party Liability rate change to +50.0%. The Physical Damage
 30 coverage is rated as a percentage of Facility's Private Passenger Physical Damage rates. This
 31 multiplier is currently set at 225% and is not proposed to change.

32
 33 In its report Oliver Wyman identified issues and considerations for the Board with respect to
 34 Facility's methods and assumptions used for: i) the loss trend rates; ii) the full credibility
 35 standard for Third Party Liability; iii) the basis for the complement of credibility; iv) the Health

³ Facility's Actuarial Memorandum, Section 2, page 31

⁴ Assuming 2.8% ROI and 0% ROE

⁵ Includes Collision, Comprehensive, Specified Perils and All Perils

1 Levy; and, v) the return on investment provision (ROI). The assumptions and methods used for
 2 all other parameters were found to be reasonable on the basis proposed and/or in accordance with
 3 the Filing Guidelines.

4
 5 Based on its review Oliver Wyman found that Facility's indicated and proposed rate level
 6 changes for Third Party Liability, Accident Benefits and Uninsured Automobile are higher than
 7 the rate level changes calculated using the Board's Filing Guidelines and alternate assumptions.
 8 By substituting alternative assumptions within the Board's Filing Guidelines Oliver Wyman
 9 estimates a rate level need of +21.5% as shown below:

Coverages	Facility Rate Indication ⁶	Oliver Wyman's Indication ⁷
Third Party Liability	+67.3%	+19.8%
Accident Benefits	+294.3%	+125.4%
Uninsured Auto	+329.3%	+132.8%
Independently Rated Coverages Total	+73.5%	+21.5% ⁸

11
 12 Oliver Wyman also noted that Facility made a number of material changes in the approach and
 13 assumptions used in its prior rate application filed in 2013 which affect the rate level indications.
 14 These relate primarily to the loss trend rate selection process, the standard for full credibility and
 15 the complement of credibility. Other changes relate to the treatment of certain expenses such as
 16 service carrier fees, excess legal fees and unallocated loss adjustment expenses.

17 18 19 **5. Public Presentations and Comments**

20
 21 At the start of the hearing on November 5, 2014 the Board heard presentations from Doug
 22 McCarthy on behalf of the St. John's Taxi Co-operative Society Limited and Todd Edmunds of
 23 Star Taxi in Corner Brook.

24
 25 Mr. McCarthy explained that he represents the majority of the industry in St. John's as their
 26 spokesperson. Mr. McCarthy stated that, if the rate increase proposed by Facility is approved, it
 27 would have a dramatic impact on the overall industry, as well as the economy of the Province.
 28 Mr. McCarthy explained that the rate increase granted last year was a surprise to the industry and
 29 was enough to force some marginal operators to retire from the industry. He questioned the
 30 factors that are driving the cost increases, such as claims settling costs, and whether the taxi
 31 industry was being fairly treated. He acknowledged that the taxi industry is a high risk business
 32 but suggested that his insurance rates should be based on him as an individual and not what he
 33 does for a living. Mr. McCarthy states that, as a taxi operator, it doesn't matter if he has not had
 34 an accident or a claim for 25 years since he will still be classified as high risk, which he queried

⁶ Assuming 2.8% ROI and 0% ROE

⁷ Assuming Board's Guideline Commercial Vehicle loss trends, ROI of 2.8%, ROE of 0%, a Health Levy provision of \$26.44 per vehicle, and Facility's standard of full credibility and complement of credibility selections from its 2013 Taxi application

⁸ Indication reduced by approximately 1% due to error discovered – CA-FA-01 and Transcript, November 17, 2014, page 3

1 was just another form of discrimination. Mr. McCarthy agreed that increased costs have to be
2 passed on but concluded:

3
4 Facility has failed to cover their losses in the past and now they seem to want to play catch
5 up at our expense. If it is because of a management issue, then Facility should get their own
6 house in order before they burden the industry with rates that may force many of us from the
7 business and have an overall impact on the provincial economy. Thank you very much.⁹
8

9 Mr. Edmunds represented Star Taxi in Corner Brook and spoke to the impact of the last Facility
10 rate increase, stating that it drove the insurance cost for his cars from \$1,206 per car to \$3,021
11 per car. According to Mr. Edmunds this resulted in him having to remove seven cars from his
12 fleet and three independents also removed their cars. He questioned Facility's commitment to
13 keep costs down. He closed by stating that his expenses keep going up and, with no way to get
14 his money back, another rate increase is "*probably going to put us out of business, that's all I*
15 *can say.*"
16

17 The Board also received several written comments, generally from taxi operators expressing
18 concerns regarding the negative impacts that the proposed rate increase would have on the taxi
19 industry in the Province.
20

21 22 **6. Board Findings** 23

24 The Board is cognizant that there are a wide range of possible outcomes in any prospective
25 ratemaking exercise. The Board must be satisfied that the proposed rate changes are supported
26 based on the information filed. This does not necessitate that Facility's proposed rate changes be
27 in-line with those calculated by Oliver Wyman, but the Board does consider the findings of
28 Oliver Wyman in assessing whether the proposed rates are too high. The Board will look to the
29 professional judgement of the actuaries, as well as the support and explanation for their
30 respective positions, to determine if the proposed rates are too high in the circumstance. The
31 Board notes that neither Mr. Doherty of Facility nor Ms. Elliott of Oliver Wyman took the
32 position that each other's work was unreasonable or contrary to actuarial practice standards.
33

34 The Consumer Advocate submits that the central theme in this proceeding and indeed the central
35 reason for the differences between the estimates of rate level need offered by Oliver Wyman and
36 Facility involves the exercise of "actuarial judgment".¹⁰ The Board agrees with this assessment
37 and accepts that actuarial analysis is not an exact science but instead relies on the experience and
38 training of the actuary to apply judgment to the results of any analysis. This is the foundation of
39 insurance ratemaking.
40

41 The Board has reviewed the record of the proceeding, including Facility's Actuarial
42 Memorandum, Oliver Wyman's report on its review of the Application, Facility's responses to
43 Oliver Wyman's report and the information requests, as well as the hearing transcripts and
44 submissions. The issues to be addressed are : i) data limitations; ii) loss development factors; iii)
45 loss trend rates; iv) full credibility standard; v) complement of credibility; vi) Health Levy; vii)

⁹ Transcript, May 5, 2015, page 15

¹⁰ Consumer Advocate Submission, January 9, 2015, page 11

1 expense provision; viii) Physical Damage coverages; ix) territorial differentiation; and, x)
 2 proposed rule changes. These issues, along with the Board's findings on each, are discussed in
 3 the following sections.

4 5 **6.1 Data Limitations**

6
7 A key issue for the Board in this Application relates to the data used as the basis for the analyses
 8 and determination of indicated rate levels. The legislation directs that the Board's determination
 9 in relation to a proposed rate increase is to be made on the basis of the insurer's projected loss
 10 experience, expenses and investment income. Where the Board determines that the insurer's loss
 11 experience is inadequate the Board is required to determine the basis upon which an insurer shall
 12 file its proposal. The Board's Filing Guidelines set out trend rates based on Industry data which
 13 may be used by insurers without the requirement for additional supporting data or justification.¹¹

14
15 Given the small number of taxis insured in Newfoundland and Labrador,¹² both Facility and
 16 Oliver Wyman used alternative data sources in addition to the Taxis experience in the analyses
 17 and determination of indicated rate levels. Facility acknowledged the data limitations, stating:

18
19 We relied on industry data because a sufficient volume of stable and credible historical
 20 experience does not exist for FA for the purpose of selecting trends by sub-coverage. We
 21 believe it is reasonable to assume that the factors that affect industry loss costs similarly
 22 affect FA, and therefore that trend structures estimated for the industry are applicable to
 23 FA.¹³

24
25 In its report Oliver Wyman addresses the data limitations:¹⁴

- 26
27 1. Facility's Taxis experience is not statistically credible due to the low number of data
 28 points.
 29 2. The loss development factors selected by Facility are based on its non-Private Passenger
 30 Vehicle¹⁵ experience through December 31, 2012, as opposed to Taxis-only experience.
 31 This requires an assumption that the split between Bodily Injury and Property Damages
 32 losses for non-Private Passenger Vehicles for each accident year is the same as for Taxis,
 33 which Oliver Wyman suggests is unlikely to be the case.
 34 3. The claim count development factors used by Facility to estimate the ultimate number of
 35 claims for its Taxis class of business for each of the accident years in the experience
 36 period are based on Industry Commercial Vehicle data as of December 31, 2012, which
 37 does not include Taxis experience. Oliver Wyman notes that the claim count
 38 development pattern for Industry Commercial Vehicles may be different than for Facility
 39 Taxis.

¹¹ As per the Board's Filing Guidelines, page A-3

¹² Facility reports 816 written Taxi exposures as of December 31, 2012 (Actuarial Memorandum, Exh-C1, line 1)

¹³ Facility Actuarial Memorandum, Section 2, page 11

¹⁴ Oliver Wyman Report, May 16, 2014, pages 20-22

¹⁵ Non Private Passenger Vehicle includes all vehicles except private passenger (e.g. commercial, motorcycles, taxis, etc.). Mr. Doherty suggest that 2/3 of these claims are probably taxis (Transcript, November 7, 2014, page 114)

1 4. Loss trend rates are developed using the Industry Commercial Vehicle experience
2 through December 31, 2012 rather than Industry Taxis experience. As with the loss
3 development factors the selected trend rates for Bodily Injury and Property Damage
4 based on this data must be combined since the Third Party Liability loss experience for
5 Taxis is not available separately for Bodily Injury and Property Damage.
6

7 During the hearing Ms. Elliott further described the impact of the data limitations on the
8 statistical analyses undertaken by both actuaries to determine loss development factors and loss
9 trend rates used to predict future costs and therefore premium requirements:
10

11 ...Any of the statistics that are presented by anybody, FA or Oliver Wyman, are not strong
12 statistics. We're dealing with very few claims. So the statistics presented by FA for its
13 models are not strong, and I can assure you if I presented statistics for any of the runs that we
14 do, they're not going to be strong either. We only have a few claims every year. There is no
15 way you're going to get strong statistics.¹⁶
16

17 During the hearing, in responding to a question from Facility's counsel on the subject of data
18 exclusions in selecting trend rates, Ms. Elliott commented:
19

20 Here with this commercial data in Newfoundland it is the most challenging data that we look
21 at. Of all the reviews for lost trend rates, it is the most challenging. It is the most limited
22 data. And so this is the approach that we've taken to try to account for this volatility in this
23 limited database that we have work with.¹⁷
24

25 In discussing the issue of the credibility standard Ms. Elliott commented:
26

27 The standard for determining whether data is sufficient for credibility, the credibility
28 standard is much higher than just for the regular experience that's used. This data would not
29 meet the standard that we see in other provinces. And I'm repeating myself, the data is very
30 thin, very volatile and not reliable in terms of the estimate that is provided. So if you're
31 asking me do I think this data is fully credible and reliable, that whatever trend result pops
32 out of the XL [*sic*] model, is the right number? The answer is no. It is not fully credible,
33 absolutely not.¹⁸
34

35 The Board believes that data limitations are a significant factor in its evaluation of Facility's rate
36 proposal.
37

38 **6.2 Loss Development Factors** 39

40 Facility uses its Newfoundland and Labrador experience for non-Private Passenger Vehicles to
41 select loss development factors which are then applied to Facility's reported incurred losses for
42 Taxis in Newfoundland and Labrador. Loss development factors were calculated as the ratio of
43 the valuation selected ultimate indemnity amount to the recorded indemnity amount as of
44 December 31, 2012 for each different year.

¹⁶ Transcript, November 18, 2014, page 153

¹⁷ Transcript, November 17, 2014, page 177

¹⁸ Transcript, November 17, 2014, pages 178-179

1 Although Facility's approach was based on different assumptions and methodologies the Oliver
 2 Wyman report confirms that Facility's selected loss development factors are reasonable, except
 3 in relation to Accident Benefits. Oliver Wyman suggests that Facility's Accident Benefits
 4 selections for periods 18-24 months and 48-54 months are higher than suggested by historical
 5 data.¹⁹ During the hearing Ms. Elliott explained the impact of the use by Facility of higher
 6 selected loss development factors on Accident Benefits loss trend rates and rate indications:

7
 8 ...although accident benefits is a small coverage, there are some larger differences there. And
 9 in this case here, I believe that these larger factors that FA is selecting, that are generally
 10 larger than if they had used their own experience, it's leading to higher loss development
 11 factors that are leading to higher loss trend rates and a higher rate indication, yeah.²⁰
 12

13 Facility states that there is no evidence to suggest that the loss development factors used in
 14 Facility's rate indications are unreasonable or that using only Taxis data as the basis for loss
 15 development factor selection would reduce the overall level of uncertainty of Facility's rate
 16 indication. In addition Facility submits that there is no evidence to suggest there is an available
 17 set of data that would produce more suitable loss development.²¹ The Consumer Advocate did
 18 not make submissions on Facility's selected loss development factors.
 19

20 The Board accepts that Facility's Accident Benefits selections for two periods are higher than
 21 suggested by historical data. Facility explained the basis for these selections as being the result of
 22 combining the experience of the Atlantic Provinces to improve the credibility of the estimates.²²
 23 The Board is satisfied that Facility has justified its approach in the circumstances.
 24

25 **The Board finds that Facility has justified the proposed loss development factors.**
 26

27 **6.3 Loss Trend Rates**

28
 29 Loss trend rates are applied to the experience period incurred losses to adjust for the cost levels
 30 that are anticipated during the policy period covered by the proposed rates. The selection of the
 31 appropriate loss trend rate by coverage is a matter of actuarial judgment in the statistical analysis
 32 of the underlying data. In this Application the issue of the selection of the appropriate loss trend
 33 rate accounts for a significant variation in the rate indications of Facility and Oliver Wyman.
 34 While both Oliver Wyman and Facility use the same Newfoundland and Labrador Industry
 35 Commercial Vehicle data the trend rates selected by each are different, as shown below:²³

¹⁹ Oliver Wyman Report, May 16, 2014, pages 10-11.

Loss Trend Rate Selections		
Coverage	Facility Selected Loss Trend Rate	Oliver Wyman Selected Loss Trend Rate
TPL Bodily Injury	+4.4%	-1.5%
TPL Property Damage	+2.4%	0.0%
Accident Benefits	+7.6%	+1.0%

1
2 Facility separately determines its frequency and severity trend rates for each coverage based on
3 its regression analysis of the Industry Commercial Vehicle ultimate losses and claim counts by
4 accident half-year over the 20-year period ending December 31, 2012. Based on the regression
5 analysis results Facility split the data into two line periods, changing at 2004-H2 to reflect a
6 change in trend. The selected frequency and severity trend rates for each of the coverages are
7 then combined to produce loss cost trend rates for Bodily Injury, Property Damage and Accident
8 Benefits.

9
10 Oliver Wyman uses the Board's Guideline loss trend rates as published in Board Directive A.I.
11 2013-02. The Board's Guideline loss trend rates are based on a loss trend analysis completed by
12 Oliver Wyman using the Industry Commercial Vehicle experience data as of December 31,
13 2012.

14
15 In its report Oliver Wyman identifies several areas of difference in Facility's selected loss trend
16 rates and the Board's Guideline loss trend rates.²⁴ Two specific areas highlighted by Oliver
17 Wyman include the use by Facility of a 20-year time period in its loss trend rate analysis and the
18 finding by Facility of a reform factor in the 2004-H2 data period.

19
20 Facility uses a 20-year period (1993-H1 to 2012-H2) for its regression analyses in selecting its
21 loss trend rates to be applied to its 2008-2012 experience period to arrive at rate indications for
22 each coverage. Ms. Elliott expressed her opinion that a 20-year time period is too long to select
23 loss trend rates to apply to the 2008-2012 period:

24
25 There is a point in time where you begin to question what am I measuring back from 1993 to
26 1998--that's sort of the first of the five of the 20 years that is presented by FA. You know,
27 I'm sure I said yesterday there's no harm in looking at it, that's fine, but when you go back
28 to 1993 and 1998 and you have to ask yourself is what's happening there relevant to 2015--
29 like where do you draw the line? We could go back 25 years, and is that really relevant? And
30 so the actuary has to make some judgment where you draw the line of what you're going to
31 include in your loss trend model, and if we had 20 years of really solid, stable data, yeah,
32 you could run that and you could run five years and say, gee, I get the same answer, you
33 know, I'm getting a really good fit. That's not the case here, and I had presented--we went
34 through with the yellow highlights yesterday how it went up and down and up an *[sic]* down,
35 and having more of that noisy data, volatile data, am I really going to get an answer over 20
36 years? I'm not certain of that. I'm not certain you get a better answer using more data that's
37 highly uncertain.²⁵

²⁴ Oliver Wyman Report, May 16, 2014, page 10

²⁵ Transcript, November 18, 2014, pages 60-61

1 Mr. Doherty explained Facility's reasoning for the use of a 20-year time period in its loss trend
2 regression analysis:

3
4 ...The reason we use a 20-year period is because if there is one trend over that 20-year
5 period, you're going to get a better estimate of that trend if you use all 40 data points as
6 opposed to using only the most recent 16 or 20 or 10 data points. That's the nature of the
7 statistical process that we go through. Using a 20-year period allows us not only to identify
8 through statistical analysis areas where or periods where potential trend rates have changed
9 over that period, it also at times gives us insight into our ability to identify where things are
10 changing and test for those.²⁶

11
12 Mr. Doherty explained that, while 20 years of data was used for the trend analysis, the
13 trend period used for rate indications is actually an eight-year period post-2004.²⁷

14
15 The second area highlighted by Oliver Wyman with respect to Facility's selected loss trend rates
16 relates to the bifurcation by Facility of the data trend starting at 2004-H2. In its Actuarial
17 Memorandum, when describing the selections of the past and future loss trends for Bodily Injury
18 severity and frequency, Facility states: "...we believe the best split to be two time periods
19 (changing at 2004-H2) to reflect the product reform, with the "past trend" ending 2012-H2 and
20 "future trend" starting 2013-H1."²⁸ A similar statement attributing the data split to product
21 reform is included with Facility's descriptions of the trend selections for Property Damage,
22 Accident Benefits and Uninsured Auto.

23
24 In its report Oliver Wyman states that Facility's regression model estimates the August 2004
25 reforms resulted in a reduction in Industry Commercial Vehicle loss costs for Bodily Injury,
26 Property Damage and Accident Benefits. With respect to the trend selection for Bodily Injury
27 Oliver Wyman stated:

28
29 *From the regression model selected by FA, FA estimates the August 2004 reforms resulted*
30 *in a reduction in Industry CV loss costs for BI of 37.1% (split between frequency at -27.2%*
31 *and severity at -13.6%). We do not find this estimate to be reasonable. We observe that*
32 *frequency began its decline well before the 2004 reforms were introduced, and we do not*
33 *find evidence that the \$2,500 deductible on non-pecuniary loss amounts introduced in*
34 *August 2004 had a measurable impact on Industry CV loss costs (but possibly contributed*
35 *to reducing the loss trend rate). In its prior filing FA did not include a parameter in its*
36 *regression model for the August 2004 reforms, so this represents a change from the prior*
37 *filing - although FA states this reform estimate is not important to its findings.²⁹*

38
39 Oliver Wyman makes a similar finding with respect to Property Damage and Accident Benefits,
40 where Facility estimates reductions in loss costs of 17.2% and 72.6% respectively. As a result of
41 these reductions Facility applies a bifurcation to its selected trend line starting at the second half
42 of 2004.³⁰

²⁷ Transcript, November 6, 2014, page 65

²⁸ Facility Actuarial Memorandum, Section II, pages 13-14

²⁹ Oliver Wyman Report, May 16, 2014, page 11

³⁰ Oliver Wyman Report, May 16, 2014, pages 11-14

1 In its response to the Oliver Wyman report Facility states:

2
3 *The decrease noted is determined from the fitted regression above and we believe it is*
4 *reasonable (given our selected periods, the regression fit of the data itself determines the*
5 *drop at 2004-H2; we are not able to specify the extent to which this is directly related to the*
6 *reform or to any other cause).*³¹
7

8 Facility further states in the same response:

9
10 *As the major component of the 2004 reform was the introduction of a deductible, we believe*
11 *it not only reasonable, but should be expected, that a one-time impact would manifest itself*
12 *(as we believe it does). A deductible where one did not exist before will take claims dollars*
13 *out of the loss costs.*
14

15 Mr. Doherty explained Facility's conclusion that there was a change in 2004-H2 and how he
16 approached the analysis of the data to arrive at a bifurcation due to a change in trend post-August
17 2004, stating:

18
19 I think I can see something that perhaps other people aren't seeing, but I still believe that
20 there are two different periods that are reflective of trends in this loss cost data, and we'll get
21 into that in a minute, but maybe we'll just slide up for the frequency for a second. Now when
22 we were looking at this, and I think it will become more evident if you start looking at the
23 other piece, there appears, in my mind, to be two distinct periods, and we know that there is
24 a reform that occurred in 2004.³²
25

26 Mr. Doherty also commented:

27
28 I'm just looking at the data, and so I see a bifurcation occurring at a point in time. It may be
29 because of the 2004 reforms, maybe not. Oliver Wyman may have done a study that focused
30 – like, maybe a closed claim study or something like that that says we actually looked at the
31 claims settlements related to non-pecuniary losses and the application of deductible pre and
32 post the 2004 reform, and we've determined based on a separate study that there is, in fact,
33 no change in the outcomes. I don't know, they may have done something like that. Maybe
34 that's how they determined that for their view the 2004 reforms had no impact on loss cost,
35 and that's fine, I don't know, I'm not aware of any study like that. We certainly did not do a
36 study. All we did was said, look, we're looking at the data, and it appears that they agree at
37 least in terms of frequency, there was a change in frequency. So we're attributing that change
38 in frequency as initial estimate due to the reforms, so it was going up. If frequency continued
39 to go up, you would have been up here, but it started to go down, so we measured the gap
40 between those two and that gap, as they point out here, was 27.2 percent drop, and then it
41 continues to go from there. On the severity, we saw the same thing. Severity was going up
42 and it went up more, and so again we looked at where it was going to go, and then compared
43 along one trend line and then the other trend line, and just compared the values to come up
44 with that. Is it because of the change in deductible; I don't know. Does it have anything at all
45 to do with the reforms or was it just coincidental; maybe, I don't know. All I know is the

³¹ Facility's response to the Oliver Wyman Report, page 9

³² Transcript, November 5, 2014, pages 100-101

1 data is telling me something happened, there's a change, you should reflect the change, it's
2 valid, so I did.³³

3
4 According to Mr. Doherty Facility's selected trend rates, using the bifurcated data, better reflect
5 the Newfoundland and Labrador experience:

6
7 ...So our assessment of the Newfoundland industry commercial, using our bifurcation of
8 periods and coming up with our estimates of what was happening with loss cost over that
9 period, it seemed to look something like what we were seeing happen with the taxis, and I'm
10 looking at that and it seems – to me, it seems to fit better...Certainly, for me, it looks like a
11 heck of a lot more like the commercial experience for the industry, which is why we picked
12 it, and doing the same thing for each of the other coverages, you get the same result. I
13 believe our trend better reflects the experience for taxis, I think it better reflects the
14 experience of the commercial vehicles in Newfoundland.³⁴

15
16 Ms. Elliott explained how Facility's selected trend rate was affected by the inclusion of a
17 bifurcation:

18
19 It's my opinion that FA's selected loss trend rate of +4.4 percent is premised on using the
20 period 2004-2 to 2012-2. There's an exclusion of a very high point in there, which I believe
21 is 2012--2011-2, a high point, but they derive this 4.4 percent starting with 2004-2 and it's
22 my view that because they use that time period, and because the first two accident half years
23 in that time period are quite low, it drives up--so they start at a low point and end up here,
24 and they end up with this +4.4 percent.³⁵

25
26 If FA had used one less year of data and started with 2005-2, they would get a couple of
27 point percentage drop in their trend rate. And if they bought into the common acceptance
28 that the reforms did not affect cost to a material or measurable degree, if they had used a ten-
29 year period, if they had used the modified loss adjustment expenses--sorry, loss development
30 factors that I refer to, they would have a much lower loss trend rate.³⁶

31
32 Ms. Elliott also explained why she considered Facility's findings with respect to a reform factor
33 to be not fully supported:

34
35 Well, we have—we review the rate filings on behalf of the Board and we have not seen that
36 in other rate filings. In FA's own rate filing last year for taxis, they assume that the reforms
37 had no impact on the cost. So this is a complete turnabout by FA, that it now sees these
38 reform savings from the 2004 reforms, or something in 2004, and you know, saying—and
39 I'm repeating what I said earlier, but saying that there's this sustained drop from these
40 reforms moving forward, that everything shifted down, we don't find that to be intuitively
41 reasonable. I can't explain to anyone why that would be the case, it doesn't need—the
42 reforms were for two hundred and fifty—sorry, \$2,500 deductible on all BI claimed and
43 some other minor changes. I can't think of any other event in the second half of 2004 that

³³ Transcript, November 6, 2014, pages 72-73

³⁴ Transcript, November 6, 2014, pages 61-62

³⁵ Transcript, November 18, 2014, pages 159-160

³⁶ Transcript, November 18, 2014, pages 160-161

1 would cause AB cost to decrease by 73 percent; the reforms weren't for AB. I just don't find
2 it intuitively reasonable, no.³⁷

3
4 In relation to whether the reforms resulted in a reduction in loss costs, Ms. Elliott stated:

5
6 That's not evident in the private passenger data at all. We're not seeing that. You know, in
7 any of the tests that have been run, it is not there...what's being provided with significant
8 savings in commercial of 37 percent on BI and 73 percent on AB, there's a flaw in the
9 model.³⁸

10
11 Ms. Elliott further stated:

12
13 ...with private passenger auto experience, the severity, the P-tests and T-tests show you there
14 was no impact, and so you have to say with a larger body of data in Newfoundland, the same
15 cars on the same roads in Newfoundland, and there's no savings on private passenger data
16 which is more stable, not as volatile as the commercial data, we're not seeing it there. Then
17 you look at a small volume of commercial data, which is very volatile, and here is says
18 there's a 37 percent savings. That just doesn't make any intuitive sense at all.³⁹

19
20 With respect to the statistical measures Facility provided as support for its loss trend rate
21 selections, Ms. Elliott stated:

22
23 You can look at statistics all you like. I'm an actuary, I look at statistics and they have value,
24 but you have to look at it: are they reasonable? And a really good case in point is you look at
25 the P-test and the T-test for the reform factor that FA has presented—we're not going to pull
26 those up on the screen and look at them, but FA is saying that these P-tests and T-tests are
27 statistically, you know, significant, and I'm going to accept that, and I don't agree with that
28 approach. I look at it and say does this make intuitive sense? Is it reasonable? Can I really
29 tell a consumer that your costs reduced by 73 percent of the reforms in AB? And they're
30 going to say to me, well, did you reduce my premium by 73 percent because the cost went
31 down? Well, the answer is no. Nobody came in – no rate filer came in with a reduction in
32 cost for AB, anywhere near or at all. Nobody came in with a reduction for BI of 37 percent.
33 Nobody for private passenger, commercial, nobody, but FA is saying that the P-tests and T-
34 tests are strong and reliable, and that's what the data says. I disagree with that approach. It's
35 flawed. It's not intuitively reasonable that this occurred. So you can look at any P-test and T-
36 test you want and say it's significant and it's perfect, but does it make sense? And I think
37 you have to look at it and ask yourself does it make sense, and I say it doesn't.⁴⁰

38
39 Facility submits that the *“issue for consideration by the Board, therefore, is the extent to which*
40 *the Facility Association's Loss Cost Trend Rates or those of the Consulting Actuary are*
41 *representative of Facility Association taxi experience in Newfoundland and Labrador.”⁴¹*

42 According to Facility it has shown that its selected past trends do reflect the underlying patterns
43 that occurred during the experience period with respect to Taxis, while Oliver Wyman
44 acknowledged that its trend rates do not. In its submission Facility reproduces its graphs showing

³⁷ Transcript, November 17, 2014, page 34

³⁹ Transcript, November 18, 2014, pages 67-68

⁴⁰ Transcript, November 18, 2014, pages 62-64

⁴¹ Facility Submission, January 9, 2015, page 10

1 selected loss trends based on Industry Commercial Vehicle data and the actual loss costs for
2 Taxis, stating, that in its opinion, its selected Industry Commercial Vehicle loss trends reflect the
3 Facility Newfoundland and Labrador Taxi experience. Facility goes on to state:

4
5 *The Consulting Actuary suggested that the taxi experience is not "credible", when*
6 *attempting to explain why her selected trend rates show decreases from 2003 to 2012 and yet*
7 *actual NL taxi ultimate indemnity values have generally been increasing since 2003.*
8 *However the concept of "credibility" is applied to ascertain whether the trends in a*
9 *particular data set (i.e. taxi experience) are adequate enough in size to make predictions for*
10 *the future. Even if the amount of data was not considered to be sufficient to be relied upon*
11 *exclusively to predict the future, this does not detract in any way from the historical*
12 *measures. We are still left with the incongruous position of the Consulting Actuary claiming*
13 *not only that it is reasonable to apply the Consulting Actuary's Commercial Vehicle TPL*
14 *declining trend from 2003 onward to taxi loss costs, when the taxi experience quite clearly*
15 *demonstrates the opposite to be true, but the equally perplexing position that this is more*
16 *reasonable than using Facility Association's trend selections which, in contrast, do align*
17 *with the taxi experience.*⁴²

18
19 According to Facility, not only do Oliver Wyman's trends fail to represent changes in Facility
20 Taxis loss costs over time, they also fail to represent the underlying Industry Commercial
21 Vehicle trends.⁴³

22
23 The Consumer Advocate submits that Facility has not justifiably demonstrated its use of non-
24 approved trend rates and that Facility should be required to use the Board approved trend rates in
25 calculating its rate changes for Taxis. On the issue of the data and Facility's loss trend rate
26 selection the Consumer Advocate states:

27
28 *In assessing the actuarial judgment of Facility Association in this filing, the Consumer*
29 *Advocate is struck by the fact that the Facility Association's approach to determining a loss*
30 *trend rate does not appear to take into consideration the fact that the parties to this*
31 *Application are dealing with exceedingly challenging experience data.*⁴⁴

32
33 Facility responds that it does not believe the above statement of the Consumer Advocate is an
34 accurate representation of Facility's position with respect to the data limitations "as Facility
35 Association recognizes this explicitly in its modeling approach via statistical analysis of the
36 results, explicitly reviewing model fits and residuals."⁴⁵ Facility acknowledges that, in its 2013
37 filing, Private Passenger data and not Industry Commercial Vehicle data was used to select the
38 Bodily Injury severity trend, primarily because of data volatility. According to Facility the
39 inclusion of accident year 2012 has enabled Facility to find a statistically significant model for
40 Bodily Injury severity based on Industry Commercial Vehicle data.

41
42 The Board accepts that the selection of loss trend rates is a matter of actuarial judgment and also
43 that, in this Application, the loss trend rate selections have a significant impact on the rate
44 indications. As noted by Oliver Wyman, if Facility had selected the Board's Guideline

⁴² Facility Submission, January 9, 2015, page 15-16

⁴³ Facility Submission, January 9, 2015, pages 12, 17

⁴⁴ Consumer Advocate Submission, January 9, 2015, page 14

⁴⁵ Facility Reply Submission, January 14, 2015, page 3

1 Commercial Vehicle loss trend rates, and with no other changes in assumptions, its Third Party
2 Liability indication would be reduced by approximately 25.4%.⁴⁶

3
4 In relation to the 20-year time period selected by Facility in its loss trend analysis the Board
5 notes the issue raised by Oliver Wyman as to the relevancy of the older data and the
6 consideration of the data limitations in selecting loss trend rates based on the longer data set. Ms.
7 Elliott comments that there is no harm in looking at the older data but notes that the data is
8 highly uncertain and questions whether you can get a better answer using more data. The Board
9 notes Mr. Doherty's explanation that, while the 20 years of data was used for the regression
10 analysis, the selected trend period is actually only eight years because of the finding of a change
11 in trend in the data at 2004-H2. The Consumer Advocate did not comment on Facility's use of a
12 20-year time period. In the Board's view, while the use of a longer data period may be justified
13 in some circumstances, a better answer may not be achieved by using more data in this case,
14 given the Commercial Vehicle data uncertainty and volatility. The issue of whether the older
15 data continues to be relevant is a concern for the Board. While the Board is not satisfied that
16 looking at a 20-year period leads to a better result in this case, the Board does not reject
17 Facility's proposals on the basis that a 20-year period was used.

18
19 The Board notes that Facility's loss trend selection relies on Mr. Doherty's judgment that a
20 distinct change in loss trends happened in 2004-H2. The Board notes that, in its 2013 Taxis
21 filing, Facility did not find evidence of a change in trend in 2004-H2 nor did it find the reform
22 variable to be statistically significant. In addition, Facility's 2013 Private Passenger filing did not
23 find evidence of a change in loss trend in 2004-H2. The Board also notes that, in the Industry
24 Commercial Vehicle loss trend rates published in Board directives since 2007,⁴⁷ there was no
25 indication of a trend bifurcation at 2004-H2, either for Private Passenger or Commercial Vehicle
26 experience. The loss trend rate reports were provided to Industry for feedback prior to
27 acceptance by the Board and there was no indication from any insurer, including Facility, that
28 the loss trend rates should reflect a trend bifurcation as of 2004-H2.

29
30 On the issue of why a trend change would now be justified when it was not present in Facility's
31 2013 Taxi filing, or its 2013 Private Passenger filing, the Board notes Mr. Doherty's statement
32 that he did not question why the change occurred but accepted the model output, saying he let the
33 data speak for itself. Mr. Doherty acknowledged that he doesn't know if the change was the
34 result of the reforms and that it may be coincidental. Facility did not provide any other
35 explanation for what may have happened in 2004 to cause this change in trend at 2004-H2. An
36 explanation would be especially important in this circumstance since Facility's finding of a
37 change in trend in 2004 represents a departure from Facility's 2013 Taxis and Private Passenger
38 filings, and from the Board's Guideline loss trend rates.

39
40 The Board notes Ms. Elliott's comment that the commercial data in Newfoundland "*is the most*
41 *challenging data that we look at. Of all of the reviews for loss trend rates, it is the most*
42 *challenging.*" The Board also notes that in its 2013 Taxis filing Facility was unable to find a
43 statistically sound trend rate from the Industry Commercial Vehicle data for Bodily Injury
44 severity or Accident Benefits frequency and severity, and that it selected its trend rates based on

⁴⁶ Oliver Wyman Report, May 16, 2014, page 15

⁴⁷ The Board first implemented guideline loss trend rates following the publication of data through June 30, 2007

1 its estimate of Private Passenger Industry experience.⁴⁸ Facility explained that the inclusion of
2 accident year 2012 enabled Facility to find a statistically significant model for Bodily Injury
3 severity based on Industry Commercial Vehicle data. Ms. Elliott comments that, had Facility
4 used one less year of data and started with 2005-H2, the trend rate would decrease by a couple of
5 percentage points.

6
7 The Board finds that the data is highly volatile. This volatility is a significant factor in the
8 Board's evaluation of the proposed rates. While the Board acknowledges Facility's statistical
9 measures supporting a reform factor, the Board notes that Facility's test statistics are not strong,
10 especially in light of the significant data limitations, and finds that these statistics do not justify
11 the proposed loss trend rates in the circumstances. Facility has not demonstrated why a product
12 reform impact (or some other impact) would show up in Facility's trend analysis some 10 years
13 later, when no intervening analysis showed such an impact. In the Board's view the finding of
14 significant reductions in loss costs for all coverages, based on the reforms introduced in the
15 second half of 2004, is not supported based on the nature and type of reforms introduced.

16
17 **The Board finds that Facility has not justified the proposed selected loss trend rates.**

18 19 ***6.4 Full Credibility Standard***

20
21 The standard of full credibility determines the weight given to the latest Facility Taxis
22 experience in the rate change indication. In this Application Facility has changed its full
23 credibility standard for Third Party Liability coverage to 3,264 claims from 5,410 claims used in
24 its 2013 Taxis filing, which increases the rate change indication by approximately 7%. The
25 credibility standard for Comprehensive and Specific Perils also changed from 3,246 claims in the
26 2013 filing to 1,082 in this filing. In both filings Facility references its 2003 Atlantic
27 Commercial Study as the basis for its selected standard. Oliver Wyman notes that Facility has
28 not provided an explanation as to why the full credibility standard was changed from its 2013
29 filing and, as a result, found that Facility's new full credibility standard for Third Party Liability
30 was not fully supported.⁴⁹

31
32 Mr. Doherty explained and corrected the basis for the current credibility standard used in this
33 filing, stating that the reference to the 2003 Atlantic Commercial Study in this filing is incorrect
34 and that the credibility standards used in this filing were based on his judgment.⁵⁰ Mr. Doherty
35 described an ongoing review by Facility of the credibility process, but confirmed that this review
36 has been pushed forward to 2015. He confirmed that the credibility standard could change again
37 and that the manner in which the credibility standard is determined could also change.⁵¹

38
39 Facility submits that a full explanation for its choice of full credibility standard has been
40 provided to support the change from the previous year's filing. Facility also submits that Oliver
41 Wyman has failed to provide any particular criticism of Mr. Doherty's actuarial judgment in
42 selection of the full credibility standard other than it is changed from the previous year's filing.

⁴⁸ Information #5

⁴⁹ Oliver Wyman Report, May 16, 2014, page 16

⁵⁰ Transcript, November 7, 2014, pages 120-121

⁵¹ Transcript, November 7, 2014, page 123

1 Facility states that *"there is nothing inherently wrong in adopting a change in actuarial*
 2 *approach where the change is properly explained and supported."*⁵²

3
 4 The Consumer Advocate submits that he does not believe that Facility should have elected to
 5 decrease its full credibility standard, and thus increase its rate change indications, at a time when
 6 taxi drivers and owners are already struggling to absorb the rate increases from its 2013 filing.⁵³
 7 Facility responded that its 2013 requested rate increase was significantly less than the rate
 8 indication and that the position of the Consumer Advocate has no actuarial foundation.⁵⁴

9
 10 The Board believes that there is value in taking a consistent approach from filing to filing, but
 11 agrees with Facility that changes in actuarial approaches between filings are acceptable where
 12 the proposed change is properly explained and supported. It appears the change in this filing was
 13 the result of the decision to update the full credibility standards used by Facility to be consistent
 14 at the coverage level across all jurisdictions based on Mr. Doherty's judgement.⁵⁵ The impact of
 15 this decision is that the full credibility standard decreased for all coverages from the 2013 rate
 16 filing, resulting in an increase of approximately 7% in the rate indication for Third Party
 17 Liability. Facility did not provide an explanation of how the full credibility claim counts were
 18 established for each coverage. The Board finds that Facility has not adequately justified a change
 19 in the full credibility standard for Newfoundland and Labrador. The Board also notes that the
 20 ongoing review by Facility of its credibility metrics in 2015 may result in further changes to the
 21 full credibility standard.

22
 23 The Board accepts that the choice of full credibility standard is a matter of actuarial judgment but
 24 any resulting rate increases must be fully supported and justified. In the Board's view Facility
 25 has not demonstrated that a change in the full credibility standard is justified in this Province.

26
 27 **The Board finds that Facility has not justified the proposed change to the standard of full**
 28 **credibility.**

29 **6.5 Complement of Credibility**

30
 31 Facility changed its basis for the complement of credibility in this Application from that used in
 32 its 2013 Taxis filing. A one year loss cost trend rate was previously used as complement of
 33 credibility for the indicated rate change, which reflected the anticipated frequency of rate
 34 reviews. In this filing Facility has changed its approach to the complement of credibility to start
 35 with one of the following estimates for the "loss ratio underlying current rates":
 36

- 37
 38
 - *where we have recently filed for a rate change, we would use the previous filings estimate*
 39 *of loss ratio assuming no rate change, then adjusted for subsequent actual (approved)*
 40 *rate changes; or*
 - *where we have not recently filed for a rate change, we assume the current rates are*
 41 *"adequate" on a basis consistent with expenses underlying the current "expiring" term*
 42

⁵² Facility Submission, January 9, 2015, page 39

⁵³ Consumer Advocate Submission, January 9, 2015, page 18

⁵⁴ Facility Reply Submission, January 14, 2015, page 6

⁵⁵ Transcript, November 6, 2014, page 92

1 *(that is, the term that will end at the point where our new proposed rates would take*
 2 *effect) and use a loss ratio consistent with this assumption.*⁵⁶
 3

4 As a result of this change Facility now adjusts its loss ratio for the inadequacy it believes exists
 5 due to the difference between its 2013 Taxis filing rate indication and the rate change approved
 6 by the Board in Order No. A.I. 9(2013). Mr. Doherty confirmed that the impact of this
 7 adjustment is an increase in the rate indication of 24%, assuming all of Facility's remaining
 8 proposals are accepted.⁵⁷
 9

10 Oliver Wyman states that they do not find it appropriate for Facility to make an adjustment in
 11 this Application for rate inadequacy carried over from its 2013 Taxis filing.⁵⁸ Oliver Wyman
 12 notes that, in its 2013 Taxis filing, Facility estimated its needed rate level change at +70.7% but
 13 proposed a rate change of +51.1%. In Order No. A.I. 9(2013) the Board approved the proposed
 14 increase of 51.1%, which was in-line with the rate increase indicated using the Board's Filing
 15 Guidelines. Ms. Elliott stated:
 16

17 So in the prior filing, we had done our analysis and we estimated the rate indication for FA
 18 could support a +50 percent change. FA proposed a +50 percent increase, and the Board
 19 approved a +50 percent increase, so in our view there was no rate inadequacy.⁵⁹
 20

21 The Consumer Advocate submits that the choice by Facility of one year of trend plus the
 22 inadequacy in the current rates implied by the rate change indication in its 2013 filing is not an
 23 appropriate basis for the complement of credibility. He argues that the indicated rate change in
 24 the 2013 filing was not approved by the Board and is significantly higher than the 2013 rate
 25 change that was calculated by the Board's actuary. The Consumer Advocate submits that Facility
 26 should be directed to recalculate the complement of credibility underlying its rate change
 27 indications, excluding the Facility estimated inadequacy in the approved rates.⁶⁰
 28

29 In its submission Facility restated its view that a rate deficiency remained of approximately 13%
 30 based on the difference between the rate level indication and the approved 2013 change. Facility
 31 points to the projected and actual results for 2012 as support for this position, stating that the
 32 results show that the deficiency was actually higher than previously thought. Facility states:
 33

34 *Clearly, if the +50.1% rate increase asked for and approved in 2013 was a "true best*
 35 *estimate", it stands to reason that the accident year 2012 loss costs would have been at a*
 36 *level no higher than \$2,219.*⁶¹
 37

38 On the matter of rate adequacy and the timing of rate filings Facility stated:
 39

40 *Mr. Doherty also noted that if Facility Association had not filed for a rate change within the*
 41 *past two or three years, they would have started from the position that the current rates were*
 42 *"adequate" (i.e. they would not have alerted the Board to the apparent deficiency in the*

⁵⁶ Facility Actuarial Memorandum, Section 2, page 8

⁵⁸ Oliver Wyman Report, May 16, 2014, page 17

⁵⁹ Transcript, November 17, 2014, pages 58-59

⁶⁰ Consumer Advocate Submission, January 9, 2015, pages 19-20

⁶¹ Facility Submission, January 9, 2015, page 42

1 *rates). Mr. Doherty believes that it would not be fair in those circumstances to start with the*
 2 *assumption that rates are inadequate, even if the experience suggests that such rates are*
 3 *indeed inadequate. However, in this particular case, Facility Association did file for a rate*
 4 *change in the immediately prior period, and that rate application clearly alerted the Board*
 5 *to existing rate inadequacy.*⁶²
 6

7 The Board does not accept that there was rate inadequacy at the time of the approval of the 2013
 8 Taxis filing. In the 2013 Taxis filing Facility requested approval of an increase of +50.1% and
 9 the Board approved an increase of +50.1%. While some of the underlying assumptions between
 10 Facility's and Oliver Wyman's indications for that filing were different, in Order No. A.I.
 11 9(2013) the Board accepted the level of rate increase proposed by Facility as justified. The Board
 12 does not accept that there was rate inadequacy at the time. In addition, in the Board's view,
 13 recovery in future rates of a deficiency from a prior period based on a difference between rates
 14 approved in 2013 and Facility's indications at the time is inconsistent with the prospective nature
 15 of rate setting.
 16

17 **The Board finds that Facility has not justified the proposed complement of credibility.**
 18

19 **6.6 Health Levy**

20
 21 The rate indications provided by Facility do not include a provision for the Health Levy, which is
 22 a set dollar amount fee per vehicle as determined by the provincial Government's Department of
 23 Health and Community Services. This is a change in approach by Facility as a Health Levy
 24 provision was included in its 2013 Taxis filing.
 25

26 Oliver Wyman explains that it understands the reason for the exclusion of the Health Levy from
 27 the rate level calculation is because the GISA exhibits do not include the Health Levy in the
 28 published exhibits for Taxis and that Facility's understanding is that the Health Levy fee for
 29 Taxis is not paid by insurers to Government. The current Health Levy fee is estimated at \$26.44
 30 per vehicle. Oliver Wyman states that it is their understanding that Taxis should be subject to the
 31 Health Levy fee and therefore a provision should be included in the rates.⁶³
 32

33 Mr. Doherty confirmed that Taxis are not included in the Health Levy assessed in the Province
 34 and, as a result, Facility does not include in the indications for this filing a provision for the
 35 Health Levy. If it was included in the rates the amount would be collected from the taxi industry
 36 but not remitted to Government, and would instead go to the members of Facility.⁶⁴
 37

38 **The Board finds that exclusion of the Health Levy is justified.**
 39

40 **6.7 Expense Provision**

41
 42 The total expense provision of 23.6% incorporated in Facility's rates includes a component for
 43 service carrier compensation. Facility's current contractual arrangement with its servicing
 44 carriers provides for a 10% variable expense provision for underwriting and processing and 6%

⁶² Facility Submission, January 9, 2015, page 44

⁶³ Oliver Wyman Report, May 16, 2014, page 15

⁶⁴ Transcript, November 6, 2014, pages 76-77

1 for commissions. Oliver Wyman notes that, if Facility's current average premium increases are
 2 approved as proposed in its filing, its servicing carriers will receive significant increases in this
 3 compensation, stating:

4
 5 *...Hence, if FA's current average premium for (TPL, AB and UA) of \$2,928 increases as*
 6 *proposed to \$4,626, its servicing carriers will receive an average increase of \$170 (from*
 7 *\$293 to \$463) per Taxi for underwriting and processing. Similarly, with FA's contractual*
 8 *arrangement of 6% commission expense, its average commission for TPL, AB and UA*
 9 *combined will increase from \$176 to \$278 per taxi.*⁶⁵

10
 11 Oliver Wyman finds the expense provision is accurately included in the calculation of the rate
 12 level change need presented by Facility but suggests that the Board may wish to confirm the
 13 reasonableness of these amounts.

14
 15 Facility notes that it makes payments to its brokers and servicing carriers as set out in the Plan of
 16 Operation. This Plan is approved by the Superintendent of Insurance in the Province and applies
 17 to all industry Commercial, non-Private Passenger and Private Passenger business in the
 18 Province. Facility submits that, as approval of the Plan falls within the jurisdiction of the
 19 Superintendent of Insurance, any attempt to suggest that the Board should approve revised rates
 20 with expense provisions different than those prescribed by the Plan would be inappropriate and
 21 would encroach upon the jurisdiction of the Superintendent of Insurance.⁶⁶

22
 23 The Consumer Advocate submits:

24
 25 *It is, in any event, difficult to accept the proposition that a servicing carrier should be*
 26 *entitled to receive more for claims expense solely because of a premium increase. Mr.*
 27 *Doherty agreed that the formula is meant to be a proxy for fair and reasonable*
 28 *compensation for these services. (Transcript, November 7, 2014, page 36) The difficulty is*
 29 *that in order to be confident that the proxy is producing fair and reasonable results it would*
 30 *be necessary to know the actual expenses incurred. That information is not available.*⁶⁷

31
 32 The Consumer Advocate refers to Ms. Elliott's testimony in which she suggested that Facility
 33 take the initiative to review the costs for underwriting, claims handling and commissions to
 34 explore ways to bring down the premium. The Consumer Advocate recommends that the Board
 35 require Facility to do this prior to its next rate filing in this Province.

36
 37 In its reply submission Facility submits that the recommendation made by the Consumer
 38 Advocate seems to implicate all rate classes and would impose a significant work effort by
 39 Facility. Facility also submits that the main issue is that loss costs, primarily Bodily Injury, and
 40 not expenses drive the rate need. Facility states that indemnity amounts for Taxis over the 10
 41 accident year history provided in Facility's filing have surpassed premium levels by more than
 42 58%. Facility states that *"This has placed a significant burden on the insurance industry and*
 43 *represents a de-facto subsidy from the insurance industry to the taxi industry."*⁶⁸

⁶⁵ Oliver Wyman Report, May 16, 2014; page 22

⁶⁶ Facility Submission, January 9, 2015, pages 45-46

⁶⁷ Consumer Advocate Submission, January 9, 2015, page 21

⁶⁸ Facility Reply Submission, January 14, 2015, page 8

1 The Board notes that neither Oliver Wyman nor the Consumer Advocate suggest that the
2 expense provision is calculated incorrectly or is not in accordance with the existing Plan of
3 Operation. Rather it is proposed that the actual costs associated with claims handling for
4 Facility's Taxis class of business be reviewed in advance of the next filing to ensure that the
5 percentage approach produces a reasonable amount to be recovered from insureds.
6

7 The Board is responsible for ensuring that the rates to be charged are not too high. The rates for
8 Taxis were increased by 50% following Facility's 2013 Taxis filing and Facility is proposing
9 another 50% increase with this filing. The percentage approach means that the compensation to
10 brokers and servicing carriers will increase significantly as a result but it is not clear whether
11 there is actually any increase in the level of effort or work required to process and handle claims.
12 The Board notes that the dollar increases in the servicing carrier payments are significant and
13 that this amount is reflected in the proposed rates. The Board finds that it is not clear that the
14 proposed expense payments to servicing carriers accurately reflects the costs of writing the
15 business. However, the Superintendent of Insurance approves the expense provision in the Plan
16 of Operation and Facility is obliged to pay these expenses. The Board finds that the expense
17 provision is calculated correctly according to the Plan of Operation and the Board will accept the
18 amount to be reflected in rates.
19

20 With respect to the suggestions by Oliver Wyman and the Consumer Advocate that Facility
21 should take the initiative to review the costs for underwriting, claims handling and commissions
22 to explore ways to reduce these costs for insureds, the Board agrees that this would be of benefit
23 to insureds. In addition, the Superintendent of Insurance for the Province may wish to review the
24 provision for expenses in the Plan of Operation.
25

26 **The Board finds that Facility has justified the inclusion of the proposed expense provision.**
27

28 ***6.8 Physical Damage Coverages*** 29

30 Facility determines rates for Physical Damage coverages by applying a physical damage
31 multiplier, currently set at 225%, to Private Passenger Automobile rates. Oliver Wyman reports
32 that the indications in this filing shows a 9% decrease for the Physical Damage coverages but no
33 change in the physical damage multiplier is proposed.
34

35 Facility's 2013 Taxis filing indicated a rate decrease for Physical Damage coverages but no
36 change in the multiplier was proposed at the time. In Order No. A.I. 9(2013) the Board found
37 that Facility's proposed physical damage multiplier for Taxis may result in rates for these
38 coverages that are too high. As a result the Board directed Facility to review its physical damage
39 multiplier and to provide further criteria in relation to its proposed multiplier for Physical
40 Damage coverages. Facility advised by letter dated June 12, 2013 that it had reviewed the
41 physical damage multiplier for Taxis and, while the factor was not actuarially justified, the
42 multiplier was reduced by approximately 10% from 250% to 225% "as a good faith gesture".
43 Facility also advised that this move would bring the multiplier in line with that of Nova Scotia
44 and Prince Edward Island and that it would be reviewed again later. The Board accepted this
45 proposal with the caveat that a further review be conducted in 18 months.

1 The Board notes that, while the physical damage multiplier is not actuarially justified based on
 2 Newfoundland and Labrador Taxis experience due to limited data, based on Oliver Wyman's
 3 report the proposed multiplier may be too high. The Oliver Wyman report states that the
 4 indications in the filing show a 9% decrease. Facility has advised that it plans to review this
 5 multiplier but did not advise whether this review has been completed. The Board finds that,
 6 based on the Oliver Wyman report, and in the absence of actuarial evidence to support the
 7 approval of the existing multiplier, Facility has not justified the proposed physical damage
 8 multiplier.

9
 10 **The Board finds that Facility has not justified the proposed Physical Damage multiplier.**

11 **6.9 Territorial Differentiation**

12
 13
 14 Facility's current Third Party Liability base rates for its Taxis class of business are not broken
 15 down by territory in the same manner as the rates for Private Passenger. The optional Physical
 16 Damage coverages are subject to separate base rates for the statistical rating territories since they
 17 are derived based on Private Passenger rates.

18
 19 The Consumer Advocate raised the issue of territorial distinction in the Province and questioned
 20 whether there was sufficient data to permit the distinctions to be drawn for separate rating for
 21 Taxis within the four territories. The Consumer Advocate submits that, based on Facility's
 22 responses to PUB-FA-16 and PUB-FA-18, there appears to be marked differences in the reported
 23 pure loss ratios in Territories 005 and 006 (Bonavista/Burin and Labrador) and Territories 004
 24 and 007 (Avalon and rest of Island). While noting that, according to Undertaking #8, the only
 25 jurisdictions in Canada where Facility has different taxi rates by territory are Alberta and
 26 Ontario, the Consumer Advocate submits:

27
 28 *Nonetheless, there does appear to be a concern about the level of subsidization in favour of*
 29 *taxi insureds on the Avalon and the rest of the Island by insureds in Labrador and*
 30 *Bonavista/Burin. In Facility Association's next taxi rate filing, the Consumer Advocate*
 31 *would recommend that Facility Association provide together with its normal filing an*
 32 *alternative for the consideration of the Board which takes into account the experience in the*
 33 *territories.*⁶⁹

34
 35 In its submission Facility recognizes that territorial rating would not impact its overall rate
 36 requirements but suggests that, by reason of the extremely small taxi population in the Province,
 37 and the even smaller group outside the Avalon, it would be challenging to attempt to separate
 38 those territories for rate setting. Facility also submits that the breakdown of the Taxis experience
 39 by territory would also likely increase expenses for Facility and its servicing carriers.⁷⁰

40
 41 The Board notes that both Mr. Doherty and Ms. Elliott confirmed that having different rates for
 42 each of the four statistical territories does not impact Facility's overall rate requirements. This is
 43 because the overall rate requirements would still be collected from the total pool of insureds. If
 44 rates for one territory are reduced the difference will be collected from the remaining insureds.
 45 The existing statistical territories recognize the different risk exposures in the Province. It seems

⁶⁹ Consumer Advocate Submission, January 9, 2015, pages 23-24

⁷⁰ Facility Submission, January 9, 2015, pages 46-47

1 reasonable to assume that there may be a risk-based reason to separate Taxis into territories for
 2 rate setting. However the Board agrees with Facility that the Taxis experience may not be a
 3 sound basis on which to establish differentiated rates for Taxis in the Province. The Board is
 4 concerned that the Industry Commercial Vehicle and Taxis experience in the Province may not
 5 be sufficient to establish actuarially justified territory differentials.

6
 7 There is not sufficient evidence in this proceeding to enable the Board to make any finding on
 8 whether territorial differentiation for Facility's rates for Taxis may be reasonable or actuarially
 9 justified. The Board is satisfied that Facility should address the issue of territorial differentiation
 10 for Taxis in the Province as part of its next rate filing for Taxis.

11
 12 **The Board finds that Facility has justified its approach in relation to territorial**
 13 **differentiation.**

14 **6.10 Proposed Rule Changes**

15
 16 Facility has proposed a number of rule changes⁷¹ to become effective with the implementation of
 17 new rates, including but not limited to:

- 18 • Offering a \$2,000,000 Third Party Liability limit and up to \$5,000,000 where required for
- 19 a contract of work;
- 20 • Increasing the available limit for physical damage coverage to \$1,000,000;
- 21 • Changes to the definition of convictions;
- 22 • Removing All Perils and replacing it with Collision and Comprehensive;
- 23 • Minor amendments to the minimum deductible tables to provide for lower limits and
- 24 where there have been 5 or more losses;
- 25 • Adding requirements for valid vehicle registrations to verify ownership and for branded
- 26 vehicles;
- 27 • Eliminating the discount for owner driven taxis;
- 28 • Amending the U.S. exposure surcharge;
- 29 • Including requirements for imported and right hand drive vehicles under
- 30 Homemade/Reconstructed vehicles;
- 31 • Amending the rating for more than one use to use the highest rated class (based on
- 32 premium) regardless of the percentage of exposure; and
- 33 • Changing the approach for vehicles used in other jurisdictions.
- 34
- 35
- 36

37 For each of the proposed rule changes Facility provides the revised wording for its Rules and
 38 Rates Manual along with the reason for the change and whether there is an impact on premiums
 39 as a result of the change. Oliver Wyman observes that, since Facility provides no information as
 40 to the rate level impact of these changes, which it understood to be due to data limitations, it does
 41 not offer any comment on the proposed changes.⁷²

42
 43 During cross-examination the Consumer Advocate questioned Mr. Doherty on the rule changes
 44 associated with removal of the discount for owner driven taxis and the rating for more than one

⁷¹ As set out in Section 3 of Facility's Actuarial Memorandum

⁷² Oliver Wyman Report, May 16, 2014, page 3

1 use, which were identified by Facility as having a possible impact on premiums. No other rule
2 changes were canvassed during the hearing or in submissions.

3
4 *Owner Driven Discount*

5 Facility currently provides a 10% premium discount for taxis that are owner driven. This
6 discount has been in place for at least 15 years.⁷³ The decision to remove this discount was based
7 on a review by Facility of its current underwriting manual. Facility submits that the owner driven
8 discount is incongruous with its position as a market of last resort, suggesting that “*like the*
9 *provision for rating for more than one use, the owner driven taxi discount is open to mischief.*”
10 Facility argues:

11
12 *The owner driven taxi discount allows for a reduction in premium that would otherwise be*
13 *collected by Facility Association, based largely on the honor system. However, based on the*
14 *insurance system in Newfoundland and Labrador, an owner driven vehicle being operated*
15 *with the permission of the owner by another operator does not relieve Facility Association of*
16 *its obligations under the policy to pay third party claims up to the statutory minimum,*
17 *notwithstanding that the insured vehicle is being operated by other than its owner.*
18 *Accordingly, a breach by the owner/operator of the assurance in the application for*
19 *insurance that the vehicle is driven only by the owner, does not relieve Facility Association*
20 *of liability under the policy, at least to the extent of the statutory minimum for third party*
21 *liability coverage amounts.*⁷⁴
22

23 In relation to the question of whether there is a basis to differentiate between vehicles that are
24 owner-driven versus employee driven from a risk perspective, and whether that risk would be
25 lower for an owner driven vehicle, Mr. Doherty stated that he believed this would make sense.
26 Mr. Doherty explained why he believed the discount should be removed:

27
28 I can't speak specifically to the rationale because I'm more on the numbers side than the
29 underwriting rule side, but as I understand it, it's more that presenting things as a discount
30 we don't think is the tone we would want to set. It would be better to surcharge people who
31 are not owners than to give owners a discount. It's semantics more than anything else, but
32 from our perspective giving discounts seem to be counterintuitive. You would usually use
33 discounts as a way of marketing so that you can attract business that you want by offering
34 them discounts, but it amounts to the same thing. I don't recall, though, that we're actually
35 proposing to put a surcharge on non-owners.⁷⁵
36

37 The Consumer Advocate notes that Facility was not able to identify how insureds would be
38 affected by the loss of this “*long-standing, apparently risk-based discount*” and, as a result, its
39 removal should not be permitted. The Consumer Advocate submits:

40
41 *Facility Association is practically the only insurance option for taxis in this jurisdiction.*
42 *Keeping the discount in place will not attract Facility Association more business – it already*
43 *has it all.*

⁷³ Undertaking #9

⁷⁴ Facility Submission, January 9, 2015, pages 47-48

⁷⁵ Transcript, November 7, 2014, page 44

1 *Finally, while Facility Association is a "last resort", it should not follow that therefore its*
 2 *insureds should be deprived of risk-based differentiation such as owner driven discounts.⁷⁶*
 3

4 Facility responds that, while it agrees with the Consumer Advocate's statement that keeping the
 5 discount will not attract more business to Facility, removing the discount may make such drivers
 6 more attractive to the regular market and therefore entice other insurers to enter the market.⁷⁷
 7

8 The Board notes that Facility has not provided actuarial evidence to justify the removal of this
 9 discount, nor did it provide information on how the removal of the owner driven discount will
 10 impact insureds and how many insureds would be affected. The Board also notes that the
 11 removal of a 10% premium discount on an average Facility premium of approximately \$3,000 is
 12 a significant impact in dollar terms. Mr. Doherty's suggestion that removing this discount may
 13 make such drivers more attractive to the regular market seems inconsistent with his comments
 14 that he is not aware of any other insurers that would offer coverage for Taxis in the Province.
 15 The Board is not prepared at this time to approve the proposed rule change to remove this
 16 discount in the absence of supporting documentation to justify the rule change.
 17

18 **The Board finds that Facility has not justified the proposed rule change to remove the**
 19 **owner driven discount.**
 20

21 *Rating for More Than One Use*

22 The Consumer Advocate also questioned Mr. Doherty on the proposal to change the manner in
 23 which vehicles are rated where there is more than one use. The existing rule provides that if a
 24 vehicle is being used for more than one purpose the rating is done on the basis of the highest
 25 percentage of exposure. Facility is proposing to change this rule so that the rating is done on the
 26 basis of the highest rated class (based on premium) regardless of exposure. Facility states that
 27 this rule has been in place in this Province since 2005, but that records from 2004 appear to show
 28 that the proposed dual usage rating was in place prior to then.⁷⁸
 29

30 Mr. Doherty agreed that this was a potentially significant rule change, particularly for an
 31 operator who would currently have less than 50 percent taxi usage. Mr. Doherty explained that
 32 the rationale behind this proposed rule change was related to the risk of the taxi business itself
 33 and that, even with a lower percentage of taxi use, the risk of being involved in an accident was
 34 higher.⁷⁹ Facility did not provide actuarial evidence to justify the proposed change.
 35

36 Facility confirmed that the proposed rating rule is in place in the Northwest Territories, Nunavut,
 37 Yukon, Alberta and Prince Edward Island and that Facility is in the process of filing in Ontario,
 38 New Brunswick and Nova Scotia.⁸⁰ No information on the number of affected insureds or the
 39 dollar impact of this proposal was provided.

⁷⁶ Consumer Advocate Submission, January 9, 2015, pages 22-23

⁷⁷ Facility Reply Submission, January 14, 2015, pages 8-9

⁷⁸ Undertaking #9

⁷⁹ Transcript, November 7, 2014, pages 49-50

⁸⁰ Undertaking #10

1 In the absence of supporting documentation to justify the rule change the Board is not prepared
 2 at this time to approve the proposed rule change to amend the rating for more than one use to use
 3 the highest rated class (based on premium) instead of the percentage of exposure.

4
 5 **The Board finds that Facility has not justified the proposed rule change related to the**
 6 **manner for rating for more than one use.**

7
 8 *Remaining Rule Changes*

9 The Board has reviewed the remaining proposed rule changes as set out in Section 3 of Facility's
 10 Actuarial Memorandum. Many of the rule changes appear to be housekeeping and/or policy
 11 enhancements and will not impact premiums for insureds. Where Facility has indicated that the
 12 rule changes may result in premium changes the Board is satisfied that the impact is not
 13 significant and mostly relates to optional or enhanced coverages, such as increased liability
 14 levels and higher limits for Physical Damage coverage.

15
 16 **The Board finds that Facility has justified the proposed rule changes, other than the**
 17 **removal of the owner driven discount and the change to the manner for rating for more**
 18 **than one use.**

19
 20 **6.11 Conclusions**

21
 22 The Board finds that Facility has not justified its proposals in relation to:

- 23 i) the loss trend rates;
 24 ii) the full credibility standard;
 25 iii) the complement of credibility;
 26 iv) the physical damage multiplier;
 27 v) the removal of the owner driven taxi discount; and
 28 vi) the manner of rating for more than one use.

29
 30 Facility's proposals result in an average overall rate level increase for all coverages combined of
 31 54.1%. The Board notes that Oliver Wyman calculated an indicated increase of 21.5% for
 32 independently rated coverages using the Board's Guidelines parameters, including the Board's
 33 commercial loss trend rates as set out in the Board Directive A.I. 2013-02.⁸¹ The Board notes
 34 that Facility proposes no rate changes for the Physical Damages coverages but Oliver Wyman
 35 reports that the indications show a 9% decrease for these coverages. The Board finds that the
 36 rates proposed by Facility are too high in the circumstances.

37
 38 As set out in section 8 of the *Automobile Insurance Act*, where the Board determines that an
 39 insurer's proposed rates are too high, the Board must either vary or prohibit the proposed rates.
 40 Based on the Oliver Wyman indications the Board accepts that a rate increase for Facility's
 41 Taxis class of business appears to be justified. The Board notes however that Facility raised
 42 several concerns in relation to Oliver Wyman's review of its filing and, in particular, with
 43 respect to Oliver Wyman's methodology for its selection of loss trend rates. These include the

⁸¹ Indication reduced by approximately 1% due to error discovered -- CA-FA-01 and Transcript, November 17, 2014,
 page 3

1 time period selected, the consideration of “stability” over “fit” and their treatment of statistical
2 outliers.⁸²

3
4 The Consumer Advocate submits that the proposed rate increases as presented and recommended
5 by Oliver Wyman are within reason particularly in light of the large rate increases approved in
6 2013.⁸³ In particular, the Consumer Advocate supports the approach used by Oliver Wyman in
7 its loss trend analysis, which the Consumer Advocate submits is more reasonable and responsive
8 to the data limitations and extreme variability.

9
10 The Board believes that Oliver Wyman’s approach to selecting loss trend rates strikes a
11 reasonable balance between stability and responsiveness in view of the acknowledged data
12 limitations and volatility. In selecting loss trend rates Oliver Wyman uses an averaging approach
13 rather than attempting to determine the best “fit” over a single time period. Oliver Wyman takes
14 the data volatility and uncertainty into consideration through the use of averaging in an attempt
15 to create a model which is stable, responsive and consistent. The Board notes Ms. Elliott’s
16 comments in relation to the data limitations:

17
18 ... The data is not credible, it’s very limited. So I don’t think that anyone can stand up in
19 good conscience and say I’ve got the perfect fit, mine is great, mine is wonderful, I’ve got
20 the right answer. That’s not the case with this data. It’s very limited and volatile, and that is
21 the point that we’re trying to make. By drawing in averages, we take a wider range of
22 possibilities. By picking just one number and saying that’s it, got the right number, I think
23 it’s not—it’s not the approach that we want to take, it’s not what we’ve done. In our
24 judgment we’ve taken a different approach.⁸⁴

25
26 The Board is satisfied that the use of the Board’s Guideline loss trend rates and the rate
27 indications developed by Oliver Wyman using these loss trend rates would not result in rates
28 which are too high in the circumstances. Further the Board accepts the approach set out in Oliver
29 Wyman’s report with respect to the full credibility standard, the complement of credibility, and
30 indications in relation to the physical damages multiplier. Based on the Oliver Wyman
31 indications the Board accepts that a rate increase is justified for Facility’s Taxis class of business
32 and, while Facility has not justified the proposed increase, it may revise its rate proposal to
33 reflect the findings of the Board in this Order. In particular the rates proposed in the revised
34 filing should be no higher than indications developed using:

- 35
36 i) the Board’s Guideline Commercial Vehicle loss trend rates in Directive A.I. 2013-
37 02;
38 ii) the standard of full credibility consistent with its last approved filing;
39 iii) the complement of credibility consistent with its last approved filing;
40 iv) a physical damages multiplier that reflects the indications; and
41 v) proposed rule changes excluding the removal of the owner driven taxi discount and
42 changes to the manner of rating for more than one use.
